

Wetland hardwood Hammock or Slough

Geomorphic positions:
Flats, slight
depressions

Felda soils are poorly or very poorly drained with a argillic horizon.

Mesic/Wet Flatwoods

Geomorphic positions:
Flats, slight rises

EauGallie soils are poorly drained with a spodic horizon above an argillic horizon.

Cutthroat seeps

Geomorphic positions:
Footslopes and toeslopes

Placid soils are very poorly drained, deep sands with an umbric horizon.

Scrubby flatwoods

Geomorphic positions:
Summits, shoulders, and
backslopes

Relative
landform
position

Pomello soils are moderately well drained, deep sands with spodic horizon between 91 and 127 centimeters.
